Margaret Thomson  
Chief Clerk, House of Representatives  
Capitol Building - Local

**HOUSE OF REPRESENTATIVES**

**Re: Iowa's 2004 Public Drinking Water Program Annual Compliance Report**

Dear Ms. Thomson:

Under the 1996 reauthorized Safe Drinking Water Act, the State of Iowa is required to publish an annual report of the status of its drinking water program. Enclosed please find the 2004 Iowa Drinking Water Program Annual Compliance Report.

This report was compiled by the staff of the Iowa Department of Natural Resources' Water Supply Engineering and Operation Sections, using data collected in 2004 from all active public water supplies in the state. The report includes explanations of the monitoring required of supplies in the state, as well as the results of those sampling efforts.

Iowa had 2,060 active public water supply systems in 2004. Of those systems, 89.9% were in compliance with all health-based drinking water standards, and 81.8% were in compliance with all major monitoring and reporting requirements. There were no waterborne disease outbreaks or deaths attributed to the drinking water at any active public water supply in Iowa.

Enclosed is the printed report, which is available electronically at the following Internet website address: <http://www.iowadnr.com/water/drinking/reports.html>.

If you have any questions about this report, please contact Mr. Dennis Alt, Water Supply Engineering Section Supervisor, at 515/725-0275.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeffrey R. Vonk".

Jeffrey R. Vonk

## Introduction

The Iowa Department of Natural Resources (IDNR) administers the Public Drinking Water Program in Iowa under delegation of authority from the United States Environmental Protection Agency (EPA). The 1996 re-authorized Safe Drinking Water Act (SDWA) requires that each state that has been granted primary implementation authority must prepare an annual report on violations of national primary drinking water regulations within the state, make the report readily available to the public, and submit it to the EPA. This report fulfills this responsibility in Iowa for the 2004 calendar year, and includes violations of maximum contaminant levels, maximum residual disinfectant levels, treatment technique requirements, major monitoring or reporting requirements, action level exceedances, or operation certification requirements.

### The 2004 Report Highlights

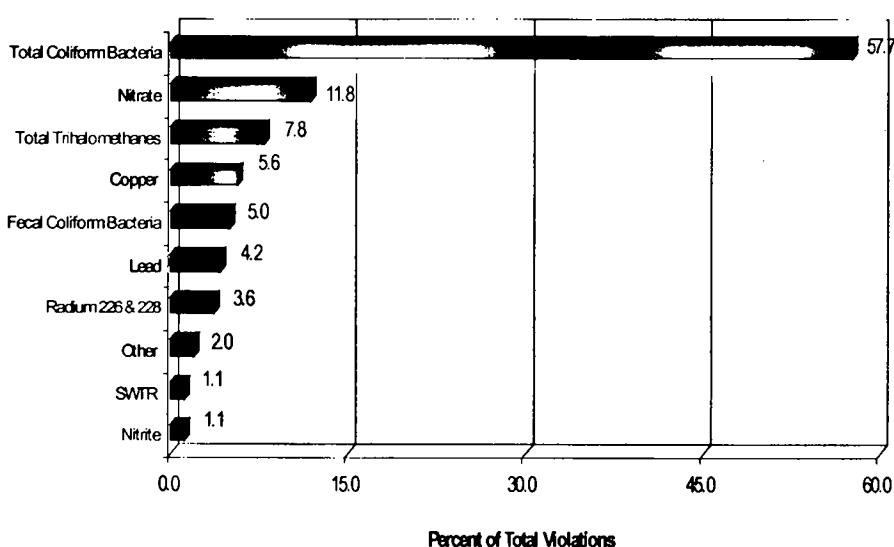

#### Compliance with Health-Based Standards

- No waterborne diseases or deaths were reported from Iowa public water supply systems (PWS) in 2004.
- Over 2.39 million people regularly received water from systems meeting all health-based drinking water standards.

- Health-based drinking water standards were met by 89.9% of the 2,060 regulated public water supplies. There were 208 public water supplies that had 357 violations of a health-based drinking water standard: maximum contaminant level (MCL), maximum residual disinfectant level (MRDL), treatment technique (TT), and action level (AL).
- Thirteen of the more than 80 regulated contaminants were found at levels that exceeded the health-based standards during 2004. Those 13 contaminants are listed below, along with the percentage each contributed to the total number of violations.

- ◆ Non-acute coli. bacteria MCL: 57.7%
- ◆ Nitrate MCL: 11.8%
- ◆ Total trihalomethanes MCL: 7.8%
- ◆ Copper AL: 5.6%
- ◆ Acute coliform bacteria MCL: 5.0%
- ◆ Lead AL: 4.2%
- ◆ Radium 226 & 228 MCL: 3.6%
- ◆ Surface water turbidity TT: 1.1%
- ◆ Nitrite MCL: 1.1%
- ◆ Arsenic MCL: 0.8%
- ◆ Fluoride MCL: 0.6%
- ◆ Uranium MCL: 0.3%
- ◆ Gross Alpha MCL (excluding radon and uranium): 0.3%

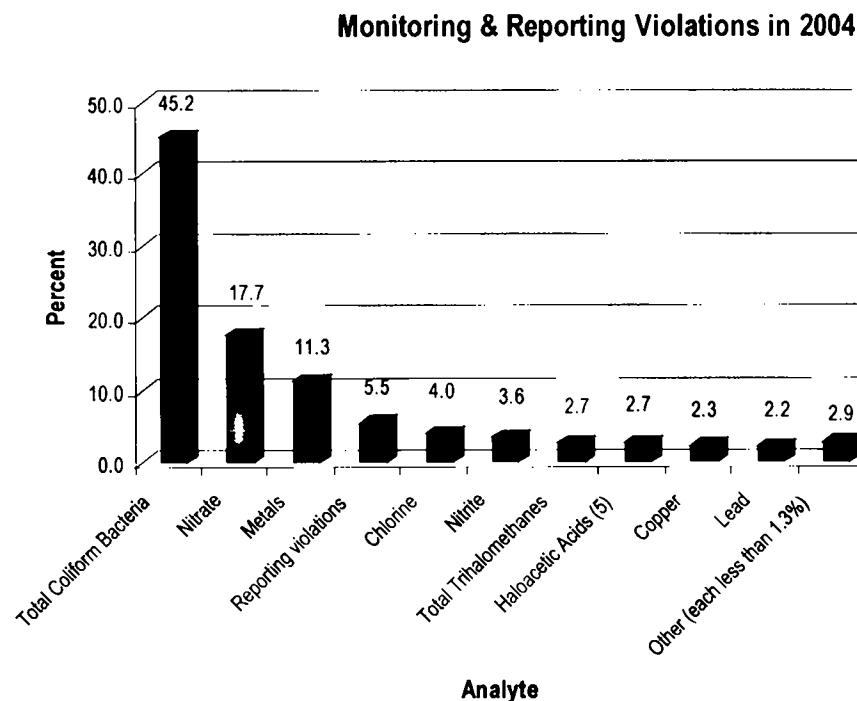

## Compliance with Monitoring & Reporting Requirements

- Over 2.5 million people regularly received water from systems that complied with all major monitoring and reporting requirements.
- Major monitoring and reporting requirements were met by 81.8% of the 2,060 regulated public water supply systems.
- There were 848 major monitoring violations in 2004. A major monitoring violation is incurred when a sample is not collected for a specific contaminant. There were 350 systems that had at least one major monitoring violation in 2004. The contaminants for which at least one major monitoring violation was issued are listed below, along with the percentage each contributed to the total number of monitoring and reporting violations.
 

<ul style="list-style-type: none"> <li>▪ Coliform bacteria: 45.2%</li> <li>▪ Nitrate: 17.7%</li> <li>▪ Metals: 11.3%</li> <li>▪ Chlorine: 4.0%</li> <li>▪ Nitrite: 3.6%</li> </ul>	<ul style="list-style-type: none"> <li>▪ Total Trihalomethanes: 2.7%</li> <li>▪ Haloacetic Acids: 2.7%</li> <li>▪ Copper: 2.3%</li> <li>▪ Lead: 2.2%</li> <li>▪ Other (5 other analytes): 2.9%</li> </ul>
--	---
- At least one reporting violation was incurred by 47 systems, for a total of 49 reporting violations. These violations were comprised of the following (both the actual number of violations and the percentage of total reporting violations are listed):
  - Failure to provide a consumer confidence report: 21 (42.9%)
  - Failure to submit the required monthly operation report: 4 (30.6%)
  - Failure to obtain a construction and/or operation permit: 4 (8.2%)
  - Failure to meet a compliance schedule: 4 (8.2%)
  - Failure to obtain a certified operator: 3 (6.1%)
  - Failure to pay the annual operation fee: 2 (4.1%)

Systems in compliance with  
all major monitoring and  
reporting requirements  
82%

Summary

## The National Public Drinking Water Program: An Overview

The United States Environmental Protection Agency (EPA) established the Public Water System Supervision Program under authority of the 1974 Safe Drinking Water Act (SDWA), which was most recently amended in 1996.

- To ensure the water is safe for human consumption, EPA sets national limits on allowable contaminant levels in public water supply systems. These limits are known as maximum contaminant levels and maximum residual disinfectant levels.
- Because certain contaminants are difficult to measure, EPA establishes treatment techniques or action levels in lieu of a maximum contaminant level to control unacceptable levels of those specific contaminants in public drinking water.
- EPA specifies how often systems must monitor for contaminants and requires those monitoring results be reported to the state. Generally, the larger the population, the more frequent the monitoring and reporting requirements.
- EPA requires systems to notify the public they serve when violations of the drinking water regulations occur. Public notification must include a clear and understandable explanation of the nature of the violation, potential adverse health effects resulting from the violation, steps the system is taking to correct the violation, and the availability and necessity of using alternative water supplies until the violation is corrected.
- EPA also has requirements for certification of water distribution and water treatment operators, environmental laboratory certification, and development of systems' technical, financial, and managerial capacity, to ensure that systems are properly operated.

The SDWA applies to all 50 States, the District of Columbia, Native American Indian Lands, Puerto Rico, the Virgin Islands, American Samoa, Guam, the Commonwealth of the Northern Mariana Islands and the Republic of Palau.

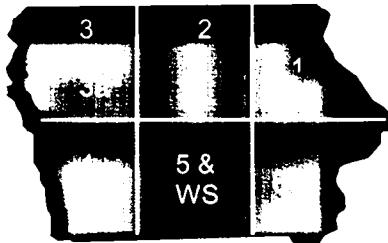

The SDWA allows States and Territories to seek EPA approval to administer the Public Water Supply Supervision Program within their state or territory, which is called primacy. To receive primacy, States must meet certain requirements set forth in the SDWA regulations, including adoption of drinking water regulations which are at least as stringent as federal regulations, and must demonstrate that the state or territory can enforce the program requirements. Of the states and territories, all but Wyoming and the District of Columbia have primacy. The EPA Regional Offices administer the PWSS programs within those two jurisdictions.

Native American tribes must meet the same requirements as a state in order to receive primacy. The three public water supplies operated by Native American tribes in Iowa have not received primacy and are overseen directly by EPA: Winn-A-Vegas Casino in Sloan; CasinOmaha in Onawa; and, the Sac & Fox Community in Tama.

EPA regional offices report to the states any enforcement actions taken by EPA within their jurisdiction. All SDWA data for a state is stored in an automated database called the Safe Drinking Water Information System (SDWIS). This database currently contains an inventory of public water supply systems, violation records, and individual analytical results.

## The IDNR Drinking Water Program Components

The Iowa public drinking water program has the following responsibilities, conducted by staff located centrally in Des Moines (Water Supply and Region 5), as well as in six other cities around the state: Manchester (Region 1), Mason City (Region 2), Spencer (Region 3), Storm Lake (Satellite Office 3A), Atlantic (Region 4), and Washington (Region 6). The offices are shown on the map at the right.

### On-Site Inspection

- conducts site surveys for well and treatment facility placement,
- inspects every public water supply system in the state at least every five years (three years for surface water CWS), which includes examination of the operation and maintenance of the entire system,
- provides technical assistance to water supply operators,
- responds to complaints from the public,
- provides emergency response to spills that may threaten water resources

### Operation Permitting

- issues the operation permits for each system at least every three years, which lists the system-specific monitoring and operation requirements,
- monitors the compliance by each system with the drinking water program requirements,
- prepares violation notices, compliance schedules and enforcement actions

### Construction Permitting

- issues construction permits for projects,
- reviews preliminary engineering reports, viability assessments and source water protection plans,
- assists systems and consulting engineers in selecting various treatment technologies for specific water quality problems.

### Water Allocation and Use Permitting

- allocates and tracks the withdrawal of water from Iowa's aquifers and surface waters,
- issues and renews water use permits that are effective for ten years, and
- reviews water conservation plans.

### Drinking Water Operator Certification

- evaluates applicants qualifications to determine eligibility for examination,
- certifies operators that successfully complete a written exam,
- renews certification of operators that earn continuing education units,

### Environmental Laboratory Certification

- certifies laboratories that analyze samples,
- contracts with the University Hygienic Laboratory to inspect environmental laboratories every two years and check the accuracy of annual proficiency testing samples.

### Drinking Water State Revolving Loan Program

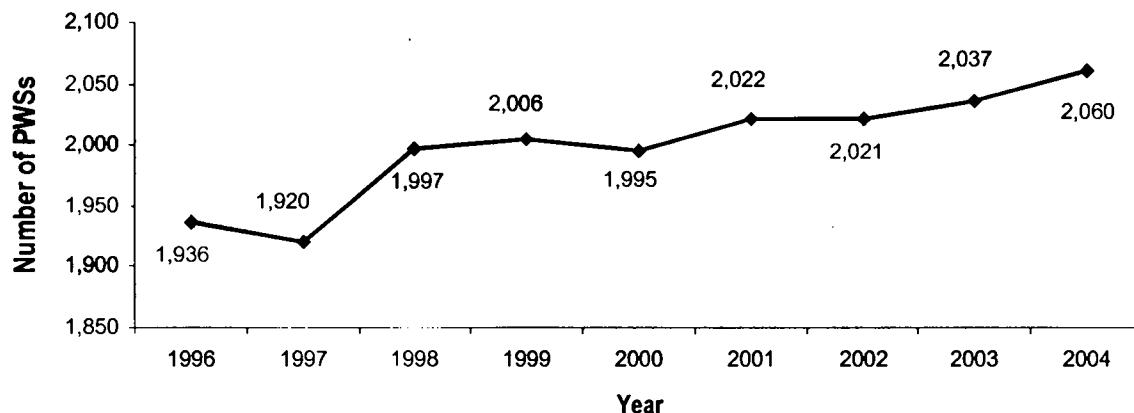

- makes loans to drinking water systems for construction of drinking water sources, treatment, storage and distribution systems to ensure public health and provide safe drinking water,
- makes loans for implementation of source water protection projects,
- scores and ranks applications based on whether the projects addresses health risks, rule compliance, infrastructure needs, and source water protection including criteria for loan eligibility.

Iowa also provides a variety of assistance to public water systems through the following four programs:

- **Capacity Development** The department continues to employ a capacity development strategy (also called viability assessment) to improve the financial, technical, and managerial capabilities of all water systems. New systems must be viable when they first serve water to the public. Existing systems are required to conduct self-assessments based upon various performance factors.
- **Source Water Protection** The first step in a multiple-barrier approach to drinking water protection is preventing contamination of drinking water sources. Iowa continues to perform source water assessments for new public water sources, but the primary emphasis of the Source Water Protection program focuses on the implementation of local and regional source water protection activities and projects. Iowa also coordinates with regional and local governmental and non-governmental entities to provide source water protection assistance and education to interested communities. As of July 2004, all existing public water supplies had a source water delineation and contaminant source inventory completed by the IDNR's Geologic Survey Section (groundwater systems) or other providers (for surface water systems). The systems then use this base document to develop their system-specific source water protection plans.
- **Public Water System Security** The department provides information, consultation, and training to public water systems and operators regarding drinking water security.
- **Technical Assistance Contracts** The department administers contracts for projects that provide technical assistance to water operators and to systems serving less than 10,000 persons.

The number of public water supply systems in Iowa continued to increase in 2004, as indicated below. Any system that was active for a single day during the year is included in the total for that year.

**Number of Regulated Iowa PWSs from 1996 - 2004**

## Iowa's Public Water Supply Systems

### Definition of a PWS

A public water supply system is a system that provides water to the public for human consumption. The system must have at least 15 service connections or regularly serve an average of at least 25 individuals daily at least 60 days out of the year. An example of a system that is not a public water supply (a private water supply) would be a well serving a farmstead with 6 residents.

A public water supply system (PWS) is either a community water system, a non-transient non-community system, or a transient non-community system.

- A **community water system (CWS)** is a PWS that meets the above definition for year-round residents. Examples of CWSs include municipalities, subdivisions, and mobile home parks.
- A **non-transient non-community water system (NTNC)** is a PWS that regularly serves at least 25 of the same people four hours or more per day, for four or more days per week, for 26 or more weeks per year. Examples of these systems are schools, day-care centers, factories, and offices. Other service-oriented businesses, such as hotels, resorts, hospitals, and restaurants, are classified as NTNCs if they employ 25 or more people and are open for 26 or more weeks of the year.
- A **transient non-community water system (TNC)** is a PWS other than a CWS or NTNC that regularly serves at least 25 individuals daily at least 60 days out of the year. Examples of TNCs are convenience stores, bars, restaurants with fewer than 25 employees, golf courses, camps, parks, and recreation areas.

### Iowa's Public Water Supply Systems

#### Number of Systems

In 2004, over 2.5 million Iowans were served by community public water supplies, or 87.7% of the total state population, with the remaining 12.3% of the population served by private water supplies. Iowa's 2,060 public water supply systems in 2004 included 1,155 CWS, 151 NTNC, and 754 TNC systems.

#### System Size

Iowa is a small-system state, as indicated in the following table, with 94% of our systems serving fewer than 3,300 people.

Population Served	EPA Classification	Number of PWS	Percentage of Total PWS
25 – 500	Very Small	1,479	71.8
501 – 3,300	Small	458	22.2
3,301 – 10,000	Medium	83	4.0
10,001 – 100,000	Large	37	1.8
Over 100,000	Very Large	3	0.2
<b>Total</b>		<b>2,060</b>	<b>100.0</b>

#### System Source Water

Iowa's drinking water is obtained from three sources:

- Groundwater from deep or shallow wells,
- Surface water from rivers, lakes, and reservoirs, and
- Groundwater that is under the direct influence of surface water as determined through testing by the presence of insects, bacteria, algae, pathogens, and/or significant and relatively rapid shifts in physical and chemical water characteristics.

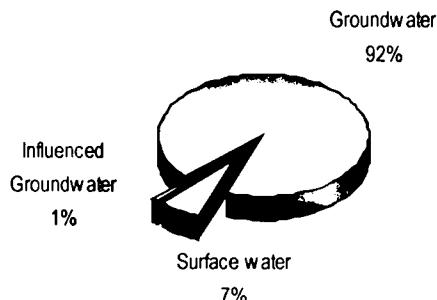

Since a PWS can use any combination of water sources in its system, the PWS is classified by the source that is most vulnerable to contamination. Surface water systems are most vulnerable to contamination, followed by influenced groundwater systems. As indicated in the following table, 92% Iowa's systems are served by groundwater sources, which serve 59% of the population. Surface water and influenced groundwater sources are used in the remaining systems, yet they serve 41% of the population. Most of the metropolitan areas of Iowa are served by surface water or influenced groundwater sources.

Source of Water	Number of PWS	Percentage of Total PWS	Percentage of Total Population Served
Surface water	136	6.6	32.0
Influenced Groundwater	25	1.2	9.6
Groundwater	1,899	92.2	58.4

Systems using surface water or influenced groundwater sources have more complex operational and monitoring requirements than do groundwater systems, because of the greater treatment requirements of their source water.

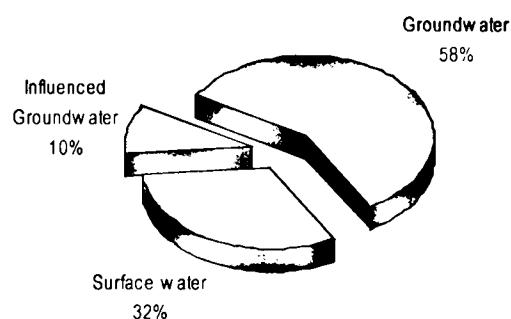

#### System Source Water in Iowa:

The vast majority of Iowa's systems are supplied by groundwater.

#### Population Served by the various Source Waters:

Even though 92% of Iowa's systems use groundwater, only 59% of the population are served by groundwater systems. The more populated areas of the state are generally served by surface water or influenced groundwater sources.

## Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs)

All systems classified as public water supplies are required to test periodically for coliform bacteria, nitrate, and nitrite. Inorganic and organic chemical testing are only required in community and non-transient non-community systems. With the exception of chlorine, chloramines, and chlorine dioxide, the contaminants are regulated by a specific maximum contaminant level (MCL). An MCL is defined as the maximum permissible level of a contaminant in water that is delivered to any user of a PWS. Chlorine, chloramines, and chlorine dioxide are regulated by a maximum residual disinfectant level (MRDL), defined as the level of a disinfectant added for water treatment that may not be exceeded at the consumer's tap without an unacceptable possibility of adverse health effects.

With both the MCL and MRDL, if the drinking water meets that limit for a specific contaminant, it is considered to be safe.

In this section, the requirements for each group of contaminants are described, including the type of violation, common sources of contamination, specific health effects, how a violation is incurred, and how the system returns to compliance. The rules pertaining to MCLs and MRDLs are listed in the Iowa Administrative Code 567—Chapters 40, 41, 42, and 43.

### **Contaminants posing an immediate risk to human health (Acute)**

There are five regulated contaminants that may pose an immediate, or acute, risk to human health if they are found in drinking water: fecal coliforms, *E. coli*, nitrate, nitrite, or chlorine dioxide.

#### **Coliform Bacteria, including fecal coliforms and *E. coli*—567 IAC 41.2(1)**

Sources of Contamination: Total coliforms are common in the environment and are generally not harmful themselves. Fecal coliforms and *E. coli* are generally not harmful themselves, but their presence in drinking water is serious because they usually are associated with sewage or animal waste. The presence of these bacteria in drinking water generally is a result of a problem with water treatment or the pipes which distribute the water, and indicates that the water may be contaminated with organisms that can cause disease (pathogens).

Health Effects: At greatest risk are children, pregnant women, infants, elderly persons, and persons with compromised immune systems. Disease symptoms may include diarrhea, cramps, nausea, headaches, and fatigue. Chlorinating the drinking water will provide disinfection. Boiling water in the home is also an effective method of sterilizing the drinking water.

Acute MCL: When total coliforms are present in any sample, that sample is also analyzed for fecal coliform or *E. coli*. Any confirmed fecal coliform or *E. coli* sample is a violation of the MCL for total coliforms. To meet this MCL, all drinking water samples must be free of these bacteria.

Violation: A PWS incurs a violation when the MCL is exceeded in any one monthly or quarterly compliance period. A violation of the acute coliform bacteria MCL is an acute violation and public notification must be started within 24 hours of notification of the violation.

Compliance Achieved: The system returns to compliance when all analytical results are below the MCL for a period of six consecutive months, and all required samples are collected as directed.

**Nitrate and Nitrite—567 IAC 41.3**

Source of Contamination: Nitrate and nitrite contamination can occur from several sources: the natural decay of organic materials such as leaves and crop residue, use of commercial fertilizers, contamination by human sewage and wastes from farm animals, and the nitrification of ammonia in the treatment and distribution system.

Health Effects: Excessive levels of nitrate and nitrite in drinking water can cause serious illness and sometimes death in infants under six months of age. Nitrate converts to nitrite, which interferes with the oxygen-carrying capacity in the child's blood (methemoglobinemia or blue-baby syndrome). This is an acute disease because symptoms can develop rapidly in infants. In most cases, health deteriorates over a period of days. Symptoms include shortness of breath and blueness of the skin. Expert medical advice should be sought immediately if these symptoms occur. Boiling the water will only concentrate nitrates in drinking water, and should not be attempted. Alternative sources of water should be used, such as Food and Drug Administration (FDA) approved bottled drinking water with low levels of nitrate clearly listed on the packaging.

Acute MCL: The MCL for nitrate is 10 mg/L as N and the MCL for nitrite is 1.0 mg/L as N.

Violation: A system incurs a violation when the MCL is exceeded in any one compliance period, assigned either as a monthly, quarterly, or annual requirement. Violation of the nitrate or nitrite MCL is an acute violation.

Compliance Achieved: The system returns to compliance when all analytical results are below the MCL for a period of six consecutive months, and all required samples are collected as directed.

**Chlorine Dioxide—567 IAC 41.6**

Health Effects: Some infants and young children who drink water containing chlorine dioxide in excess of the MRDL could experience nervous system effects. Similar effects may occur to the fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL. Some people may experience anemia. Violations of the chlorine dioxide standard within the distribution system may harm human health based on short-term exposures. Certain groups, including fetuses, infants, and young children, may be especially susceptible to nervous system effects from excessive chlorine dioxide exposure.

Acute MRDL: The MRDL for chlorine dioxide is 0.8 mg/L as ClO<sub>2</sub>, and only applies to those systems using chlorine dioxide in their treatment processes. An acute MRDL occurs when too much of the chlorine dioxide is applied during the treatment process at the treatment plant.

Violation: A system incurs an acute violation when the daily monitoring results in the distribution system exceed the MRDL on the day following an elevated chlorine dioxide level at the entry to the distribution system.

Compliance Achieved: The system returns to compliance when the analytical results are below the MRDL for a period of six consecutive months, and all required samples are collected as directed.

**Contaminants posing a long-term risk to human health (chronic or non-acute)****Total Coliform Bacteria—567 IAC 41.2(1)**

Source of Contamination: Total coliforms are common in the environment and are generally not harmful themselves, but their presence in drinking water is serious because it indicates a pathway of contamination. The presence of these bacteria in drinking water generally is a result of a problem with water treatment or the pipes which distribute the water, and indicates that the water may be contaminated with organisms that can cause disease.

Health Effects: At greatest risk are children, pregnant women, infants, elderly persons, and persons with compromised immune systems. Disease symptoms may include diarrhea, cramps, nausea, headaches, and fatigue. Chlorinating the drinking water will provide disinfection. Boiling water in the home is also an effective method of sterilizing the drinking water.

Non-Acute MCL: Compliance with the MCL is determined by the presence or absence of total coliform bacteria in a sample. Any confirmed total coliform sample, with no detection of fecal coliform or *E. coli*, is a violation of the MCL for total coliform bacteria. To meet this MCL, all drinking water samples must be free of total coliform bacteria.

Violation: A system incurs a violation when the MCL is exceeded in any one compliance period assigned either as a monthly or quarterly requirement.

Compliance Achieved: The system is returned to compliance when all results are below the MCL for a period of six consecutive months, and all samples are collected as directed.

### **Inorganic Chemicals—567 IAC 41.3 (not including lead & copper)**

Source of Contamination: Inorganic contaminants can leach into drinking water after dissolving from naturally-occurring minerals in the ground, or from runoff from industrial sources or landfills. Chlorite and bromate are byproducts of disinfection.

Health Effects: These contaminants may damage organs such as the kidneys and liver, damage the cardiovascular system and central nervous system, and are sometimes associated with high blood pressure and cancer. High levels of fluoride may cause dental and skeletal fluorosis.

Non-Acute MCL: Compliance with the MCL is determined based upon the sampling frequency:

- For systems collecting a sample every month or quarter, compliance with the MCL is determined using a running annual average.
- For systems collecting a sample annually or longer in frequency, compliance with the MCL is determined using the average of the initial sample and a confirmation sample.

Compliance with the chlorite requirements for systems using chlorine dioxide is determined from both source/entry point and distribution system samples.

Violation: A PWS incurs a violation when the MCL is exceeded in the average of the required samples.

Compliance Achieved: The system is returned to compliance when it has no monitoring or MCL violations for a period of six consecutive months.

### **Organic Chemicals—567 IAC 41.5**

Organic chemicals are classified as a volatile organic chemical [VOC] or a synthetic organic chemical [SOC].

Sources of Contamination: Organic contaminants come from petroleum solvents, paint removers, degreasers, cleaning fluids, pesticides, gasoline, electrical transformers, manufacturing processes, chemical production, byproducts from disinfection, and the production of plastics. Agricultural runoff, improper waste disposal, and improper handling and storage techniques contribute to drinking water contamination via percolation of the contaminant through the soil into the groundwater.

Health Effects: These contaminants may damage organs such as the heart, liver, and kidneys, damage the central nervous and immune systems, and cause cancer.

Non-Acute MCL: Compliance with the MCL is determined based upon the sampling frequency:

- For systems collecting a sample annually or longer in frequency, compliance with the MCL is determined using the average of the initial sample and a confirmation sample.
- For systems collecting a sample every month or quarter, compliance with the MCL is determined using a running annual average.

For contaminants with an established Health Advisory (HA) level but no established MCL, the PWS is required to conduct public notification each quarter in which the HA is exceeded.

Violation: A PWS incurs a violation when the MCL is exceeded in the average of the required samples.

Compliance Achieved: The system is returned to compliance when it has no monitoring or MCL violations for a period of six consecutive months.

### **Radionuclides—567 IAC 41.8**

Source of Contamination: Alpha emitters, which include radium and uranium, occur naturally in certain groundwaters in the state due to the geological formations, particularly in the deeper aquifers. Beta emitters are usually the result of manmade sources or activities.

Non-Acute MCL: Compliance with the MCL is determined from the annual average of four quarters of sampling, either four separately analyzed samples or four temporally composited aliquots.

Health Effects: Radionuclide contaminants may cause cancer.

Violation: A PWS incurs a violation when the MCL is exceeded in the average of the required samples.

Compliance Achieved: The system is returned to compliance when it has no monitoring or MCL violations for a period of six consecutive months.

### **Disinfectants—567 IAC 43.6**

Disinfectants are regulated by a maximum residual disinfectant level, MRDL, which is the maximum amount of disinfectant allowed in the system.

Health Effects: Health effects for chlorine and chloramines include irritating effects to the eyes and nose, stomach discomfort, and (chloramine only) anemia. Chlorine dioxide can cause nervous system effects and anemia. Similar effects may occur in fetuses of pregnant women who drink water containing chlorine dioxide in excess of the MRDL.

Non-Acute MRDL: Compliance with the chlorine and chloramine maximum residual disinfectant level (MRDL) is determined from the annual average of twelve months of sampling. Compliance with the chlorine dioxide maximum residual disinfectant level is determined from the comparison of the source/entry point and distribution system samples to the MRDL. Chlorine dioxide can be either an acute (found in the distribution system above the MRDL) or a non-acute health risk (only found at the treatment plant above the MRDL), depending upon the duration and location of the elevated levels in the system.

Violation: A system incurs a violation for chlorine or chloramines when the MRDL is exceeded in the annual average of the required samples. A non-acute violation is incurred for chlorine dioxide when the source/entry point sample exceeds the MRDL for two consecutive days and the distribution system samples are all below the MRDL.

Compliance Achieved: The system is returned to compliance when all results are below the MRDL for a period of six consecutive months, and all samples are collected as directed.

## Action Level and Treatment Technique Requirements

Certain systems are required to meet action level and treatment technique requirements. All NTNC and CWS systems are required to comply with the lead and copper action levels. All systems using surface water or influenced groundwater are required to comply with the treatment techniques.

In this section, the requirements for each group of contaminants are described, including the type of violation, common sources of contamination, specific health effects, how a violation is incurred, and how the system returns to compliance. If the drinking water from these systems meets the stated requirements, it is considered to be safe.

### Action Level (AL) Requirements

#### **Lead/Copper Action Levels—567 IAC 41.4**

Action Level Exceedance: Lead and copper are regulated by action levels (AL) rather than MCL standards. Compliance with the action level is based upon the number of samples collected. The lead action level is exceeded if the concentration of lead in more than 10 percent of tap water samples collected during any monitoring period is greater than 0.015 mg/L (i.e., if the "90th percentile" lead level is greater than 0.015 mg/L). The copper action level is exceeded if the concentration of copper in more than 10 percent of tap water samples collected during any monitoring period is greater than 1.3 mg/L (i.e., if the "90th percentile" copper level is greater than 1.3 mg/L). If the action level at the 90th percentile is exceeded for either lead or copper, it represents a long-term risk to health.

Source of Contamination:

- Lead is a common metal found in lead-based paint, household dust, and certain types of pottery, porcelain, and pewter. It can be found in drinking water due to leaching from lead pipes, from lead solder on indoor plumbing, or from brass faucets and fixtures.
- Copper is often used to plumb residential and commercial structures that are connected to water distribution systems. Leaching of copper from these sources can result in contamination of the drinking water.

Health Effects: Lead builds up in the body over many years and can cause damage to red blood cells and kidneys, as well as damage to the brain, causing mental retardation. Copper at high levels can cause stomach and intestinal distress, liver and kidney damage, and anemia.

Violation: A PWS is out of compliance when the action level is exceeded for either lead or copper in any one compliance period, assigned either as a six-month, annual, or triennial requirement. Once the action level is exceeded, the PWS must collect water quality parameters, develop a corrosion control treatment study, implement steps to control the corrosion in the water, and collect additional samples to demonstrate return to compliance with the action level standard.

Compliance Achieved: A system is returned to compliance when the sample results for two compliance periods are below the action levels for both lead and copper. This can take several years to accomplish due to the time needed to refine corrosion control processes, which is then followed by a year of sampling. Those results must be below the action level before the violation is considered to be compliance achieved.

## Treatment Technique Requirements (TT)

EPA established treatment techniques in lieu of MCLs to control unacceptable levels of some contaminants. If a system using surface water or influenced groundwater exceeds the turbidity limit, does not meet the residual disinfectant requirements, or does not meet the disinfection contact time ratio (CT), that system incurs a treatment technique violation. The violation could be either an acute or non-acute violation, depending upon the specific situation.

### **Surface Water Treatment Rule & Interim Enhanced Surface Water Treatment Rule—567 IAC 43.5 and 43.9**

This rule establishes criteria under which water systems supplied by surface water (SW) or groundwater under the direct influence of surface water (IGW), must filter and disinfect the water during the treatment process. These required treatment techniques are in addition to the other requirements of groundwater systems. All SW/IGW systems have filtration treatment in Iowa.

**Treatment Techniques:** For purposes of this report, treatment techniques are specified for SW/IGW systems to reduce or remove contaminants that must be monitored at the system and cannot be feasibly or economically measured in a laboratory. The definition of a treatment technique is a treatment process that leads to a reduction in the level of a contaminant sufficient to meet drinking water standards. Examples of treatment techniques for SW/IGW systems are turbidity removal, disinfectant residual maintenance, and sufficient disinfectant contact time.

### **Turbidity—567 IAC 43.5 and 43.9**

**Treatment Technique:** All SW/IGW systems, regardless of size, must meet the treatment techniques for turbidity. Turbidity (or cloudiness) of drinking water is a measure of the minute particles suspended in the water that can interfere with disinfection and testing for bacteria. It can also prevent maintenance of an effective disinfectant residual throughout the distribution system.

**For systems serving fewer than 10,000 people:** Systems using conventional or direct filtration must meet the following two treatment techniques for turbidity:

- the turbidity level of representative samples of a PWS's filtered water must be less than or equal to 0.5 nephelometric turbidity units (NTU) in at least 95% of the measurements taken each month, and
- no single sample result may exceed 5 NTU.

**For systems serving 10,000 or more people:** Systems serving 10,000 or more people are required to remove 99% (2-log) of the *Cryptosporidium* oocysts. In addition, systems using conventional or direct filtration must meet the following two treatment techniques for turbidity:

- the turbidity level of representative samples of a PWS's filtered water must be less than or equal to 0.3 NTU in at least 95% of the measurements taken each month, and
- no single sample result may exceed 1 NTU.

**Sources of Contamination:** The major source of turbidity contamination is soil runoff.

**Health Effects:** Turbidity by itself has no health effects. However, turbidity can interfere with disinfection and provide a medium for microbial growth. Turbidity may indicate the presence of disease-causing organisms such as bacteria, viruses, and parasites such as *Giardia lamblia* and *Cryptosporidium* that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches and can result in death.

**Violation:** A PWS incurs a treatment technique violation when either standard is exceeded in any month.

Compliance Achieved: A system is returned to compliance when turbidity results consistently meet the standards.

#### **Residual Disinfectant (minimum)—567 IAC 43.5**

All SW/IGW systems must provide disinfection to provide inactivation or removal of 99.9% *Giardia lamblia* cysts and 99.99% viruses. The chlorine residual in drinking water is a measure of the amount of available chlorine in the water. It also allows the maintenance of an effective disinfectant agent throughout the distribution system.

- The disinfectant entering the distribution system cannot be lower than 0.3 mg/L free residual chlorine for more than four hours.
- The disinfectant within the distribution system, measured as total chlorine, combined chlorine, or chlorine dioxide, cannot be undetectable in more than 5% of the samples each month for any 2 consecutive months. This also applies to heterotrophic plate counts (HPC) which can be measured in lieu of disinfectant monitoring. The HPC must be less than or equal to 500 colony forming units per milliliter of sample in order to have acceptable disinfectant residual.

#### **CT Ratio—567 IAC 43.5**

All SW/IGW systems must determine their CT value on a daily basis.

- The CT in drinking water is determined by multiplying the disinfectant concentration by the amount of time that the disinfectant is in contact with the water. Each system must achieve a specific CT prior to the treated water entering the water distribution system. The amount of CT required depends on water quality parameters, which include the pH and temperature of the water.
- Insufficient CT can allow disease-causing organisms such as *Giardia lamblia* or viruses to survive and thereby be distributed throughout the system.

Health Effects: CT has no health effects, however, insufficient CT levels can allow disease-causing organisms that can cause symptoms such as nausea, cramps, diarrhea, and associated headaches to survive and enter the distribution system.

Violation: A system incurs a treatment technique violation when the CT ratio or residual disinfectant requirement is insufficient.

Compliance Achieved: A system is returned to compliance when the CT ratio is sufficient and the residual disinfectant requirements have been met. The violation could be returned to compliance in the following month, or the time period could be longer, depending upon the action needed to correct the violation.

#### **Disinfection Byproduct Precursor Removal—567 IAC 43.6**

All SW/IGW systems using conventional filtration treatment must determine the removal percentage of disinfection byproduct precursors (organic carbon) on a monthly basis. Failure to remove an adequate percentage is a treatment technique violation. There are alternative compliance criteria that may be used by the system if it is unable to remove the required percentage of total organic carbon. Compliance is determined on running annual average.

Health Effects: Total organic carbon has no health effects, however, it provides a medium for the formation of disinfection byproducts. These byproducts include trihalomethanes and haloacetic acids. Drinking water containing these byproducts in excess of the MCL may lead to adverse health effects, liver, or kidney problems, or nervous system effects, and may lead to an increased risk of getting cancer.

Violation: A system incurs a treatment technique violation when the precursor removal percentage is insufficient, and an alternative compliance criteria cannot be used.

Compliance Achieved: A system is returned to compliance when it can meet the precursor removal requirements.

## Violation Data for MCL, MRDL, AL, and TT

Over 2.39 million people served by Iowa public water supply systems received water that was in compliance with all health-based standards, including MCL, MRDL, AL, and TT standards. In 2004, 88.3% of the population served by community public water supply systems received water that met all drinking water standards adopted by the department. The 2005 goal is to improve that percentage to 95 percent.

Of the 2,060 regulated PWSs in Iowa, 89.9% were in compliance with all MCL, MRDL, AL, and TT standards. There were 208 PWSs that had one or more violation of an MCL, AL, or TT standard. There were no MRDL violations in 2004. There were 357 violations of thirteen contaminants in Iowa in 2004, as indicated in the following table. The most frequent standard that was not met in Iowa is coliform bacteria, which, because all systems must monitor for coliform bacteria at least each quarter, is also the most frequently sampled contaminant in the state. Of the 72,093 samples collected for these contaminants, only 0.50% resulted in the violation of a health standard.

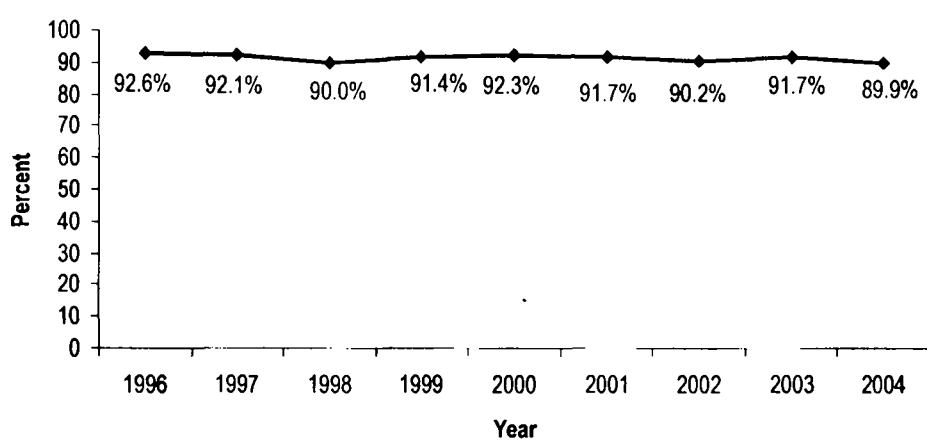

Analyte	Number of PWS	Number of Violations	Percentage of the Total Number of Violations	Number of Samples Collected, 2004	System Population*
Arsenic	2	3	0.8	747	65
Coliform Bacteria, Fecal	14	19	5.0	1,565	2,728
Coliform Bacteria, Total	135	206	57.7	52,238	101,415
Copper	15	20	5.6	4,536	9,718
Fluoride	1	2	0.6	1,508	350
Gross alpha (excluding Rn & U)	1	1	0.3	137	716
Lead	14	15	4.2	4,543	63,472
Nitrate	23	42	11.8	4,143	8,761
Nitrite	4	4	1.1	615	4,325
Radium 226 & 228 (combined)	4	13	3.6	202	31,017
SWTR Turbidity	2	4	1.1	not applicable	86,203
Total Trihalomethanes	16	28	7.8	1,852	49,274
Uranium	1	1	0.3	7	251
<b>Total:</b>	<b>208**</b>	<b>357</b>	<b>100%</b>	<b>72,093</b>	<b>316,182**</b>

\* The population for a system with multiple violations in a single category was only included once in this total.

\*\* Each PWS is only included once in the total, even though they may have multiple violations. Likewise, the population of a system is only included once in the system population, even though multiple violations may have occurred in a system.

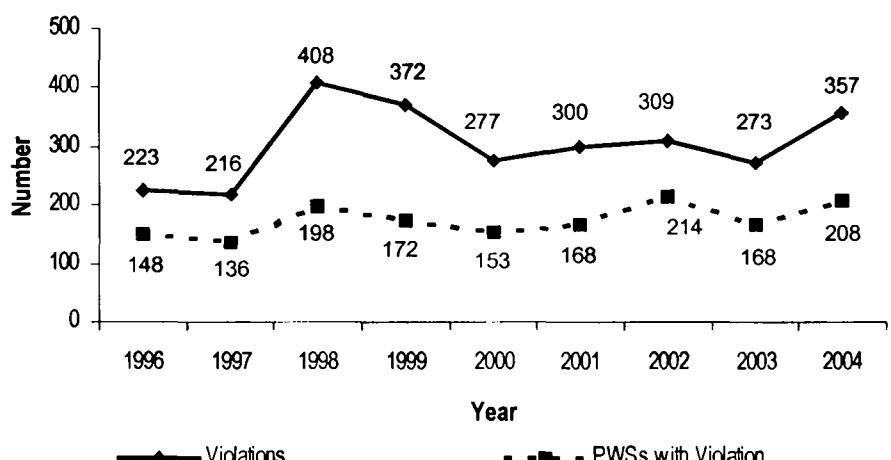

The number of public water supply systems in compliance with all health-based standards continued a similar trend in 2004 as it had in the past nine years, as indicated in this chart. However, in 2004, a few more populous systems had lead, radionuclide, and trihalomethane MCL violations, which contributed to a larger percentage of Iowa's population receiving water from systems with one or more violations. In 2004, 88.3% of the population served by all Iowa public water supply systems were in compliance with all health-based standards.

**Percentage of PWS in Compliance with all MCL, AL, TT, & MRDL:  
1996 - 2004**

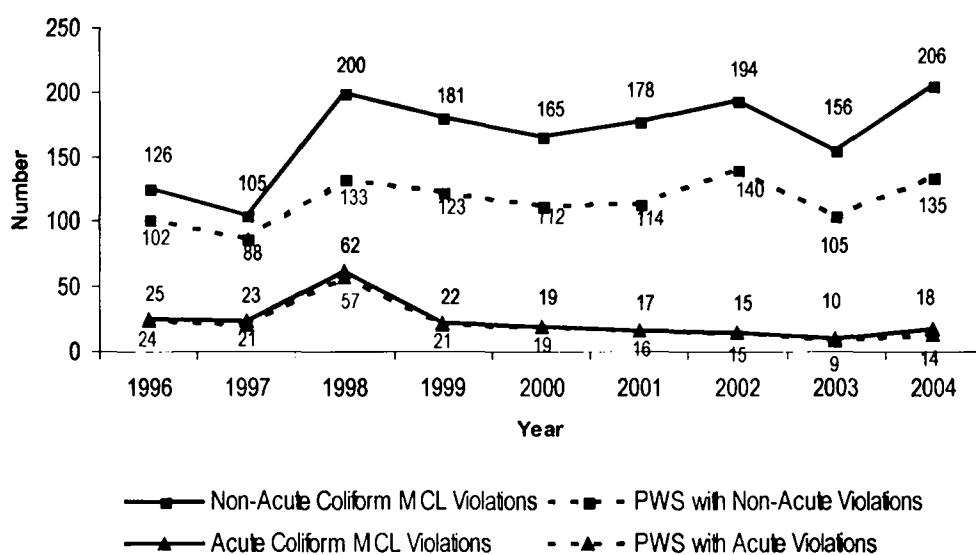

In 2004, both the number of systems with violations of health-based standards and the number of violations increased from the previous year. This is in part due to the increase in the disinfection byproduct total trihalomethane MCL violations, related to a new program affecting most community public water supply systems in 2004. Total coliform bacteria and nitrate MCL violations also contributed to the increase.

### Health-Based Standards Violations: 1996 - 2004

### Coliform Bacteria MCL Violations: 1996 - 2004

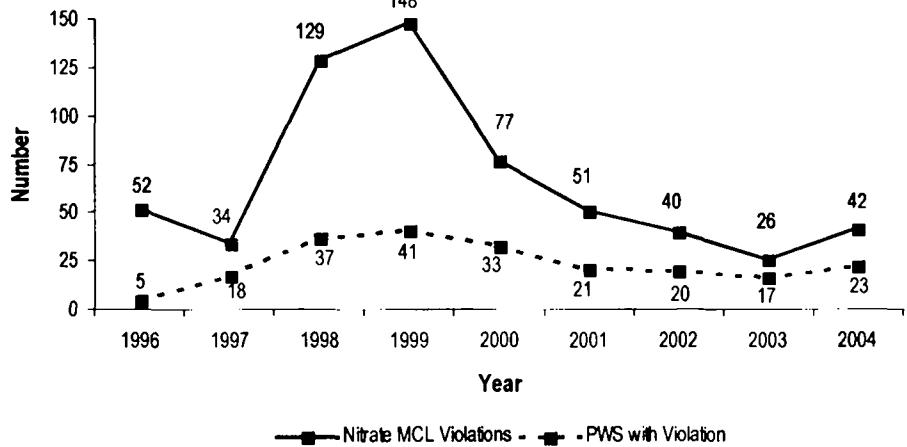

The number of coliform bacteria MCL violations and the number of systems with those violations increased in 2004. Acute coliform MCL violations are those that have confirmed presence of fecal coliform or *Escherichia coli*, while non-acute coliform MCL violations are those with confirmed coliform bacteria presence that is not of fecal origin.

The number of nitrate MCL violations and the number of systems with nitrate violations increased from the previous year, to levels similar to 2002.

- Two systems changed the land use near their wells. One changed from pasture/grassland to row crops, while the other changed from a protected wellhead area to row crops. Both systems had had historic nitrate violations, but had previously resolved them through more protective land uses. Now, with the land use change, they are both in violation once again.

### Nitrate MCL Violations: 1996 - 2004

Violation Data: MCL, MRDL, AL, and TT

## Major Monitoring & Reporting Violations

Monitoring and Reporting (M/R) violations for this report were based on the guidelines briefly described in the next table. EPA deems these violations to be classified as major violations. Minor monitoring violations are those in which some, but not all, of the required monitoring was completed. Minor monitoring violations are not listed in this report. Systems are assigned the monitoring requirements for each contaminant in an operation permit that is issued at least every three years. The monitoring requirements vary by contaminant, from sampling every four hours (turbidity) to sampling once every nine years (inorganic chemicals). The specific requirements are listed in the Iowa Administrative Code (567) Chapters 41, 42, and 43.

### **Monitoring Guidelines by Rule:**

Rule	Violation Type	Description
Total Coliform Rule	M/R, Routine Major	No samples collected during a compliance period
	M/R, Repeat Major	No follow-up samples collected after a positive sample
Surface Water Treatment Rule & Interim Enhanced Surface Water Treatment Rule	M/R, Routine Major	Collected less than 10% of samples required during a compliance period
Lead and Copper Rule	M/R Routine Tap	Failure to collect the initial tap samples followed by a failure to correct that omission within 3 months for large systems, 6 months for medium systems, and 12 months for small systems, or the failure to submit the associated report.
	M/R Routine Tap	Failure to collect any required samples.
Phase I, II, IIB, and V Rules (Inorganic and organic chemicals)	Regular Monitoring	Failure to collect any required samples
Total Trihalomethanes and Haloacetic Acids	M/R, Routine Major	Failure to collect any required samples
Radionuclides	M/R, Routine Major	Failure to collect any required samples
Any Inorganic or Organic Chemical	Confirmation/Check Major	Failure to collect the required confirmation sample.

**Out of Compliance:** A violation is incurred when the PWS fails to collect, have analyzed, and report the required number of samples in any one compliance period. One violation is issued for each analyte when samples are not collected, analyzed, and reported in accordance with the system's operation permit.

**Compliance Achieved:** A system is returned to compliance when the samples are collected and the results are reported to the IDNR.

## Major Monitoring and Reporting (M/R) Violation Data

Over 2.5 million people served by Iowa's systems received water that met the major monitoring and reporting requirements. Of the 2,060 regulated PWSs in Iowa, 81.8% (1,686 PWSs) were in compliance with all major monitoring and reporting requirements. There were 374 PWSs serving a total population of 180,264 that incurred 897 monitoring and reporting violations in 2004. The IDNR assigns violations by contaminant for each system, which can result in a single system incurring several monitoring violations. For example, if a system did not collect its single volatile organic compound sample in the required compliance period, it would receive 21 major monitoring violations - one for each contaminant.

Listed below are the contaminants with a major monitoring or reporting violation in 2004. The majority of violations were for failure to collect coliform bacteria samples (45.2%), followed by failure to collect nitrate samples (17.7%). These are the two contaminants that must be sampled most frequently by all systems.

Contaminant	Number of PWS	Number of Violations	Population Affected *	% Monitoring and Reporting Violations **
<b>MONITORING</b>				
Antimony	11	12	5,099	1.3
Arsenic	7	7	3,377	0.8
Barium	11	12	5,099	1.3
Cadmium	11	12	5,099	1.3
Total Organic Carbon	1	2	252	0.2
Chlorine	36	36	12,683	4.0
Chromium	11	12	5,099	1.3
Coliform Bacteria, Total	232	405	38,906	45.2
Copper	19	21	5,066	2.3
Fluoride	11	11	5,099	1.2
Gross alpha, excluding radon & uranium	3	6	29,711	0.7
Haloacetic Acids (5)	22	24	70,724	2.7
Lead	18	20	4,876	2.2
Mercury	11	12	5,099	1.3
Nitrate	107	159	41,371	17.7
Nitrite	23	32	3,829	3.6
Radium 226 & 228	4	6	1,918	0.7
Selenium	11	12	5,099	1.3
Sodium	10	10	4,921	1.1
Surface Water Treatment Rule requirements	1	1	2,129	0.1
Thallium	11	12	5,099	1.3
Total Trihalomethanes	22	24	70,724	2.7
<b>Monitoring Total:</b>	<b>350***</b>	<b>848</b>	<b>172,961***</b>	<b>94.5**</b>
<b>REPORTING</b>				
Failure to provide consumer confidence report	21	21	5,591	42.9
Failure to submit monthly operation report	15	15	1,080	30.6
Failure to obtain a construction or operation permit	4	4	1,023	8.2
Failure to pay the annual fee	2	2	204	4.1
Failure to obtain a certified operator	3	3	3,207	6.1
Failure to comply with a compliance schedule	4	4	1,473	8.2
<b>Reporting Total:</b>	<b>47***</b>	<b>49</b>	<b>12,426***</b>	<b>5.5**</b>
<b>Monitoring &amp; Reporting Total:</b>	<b>374***</b>	<b>897</b>	<b>180,264***</b>	<b>100</b>

\* The population of each PWS is only counted once for each contaminant.

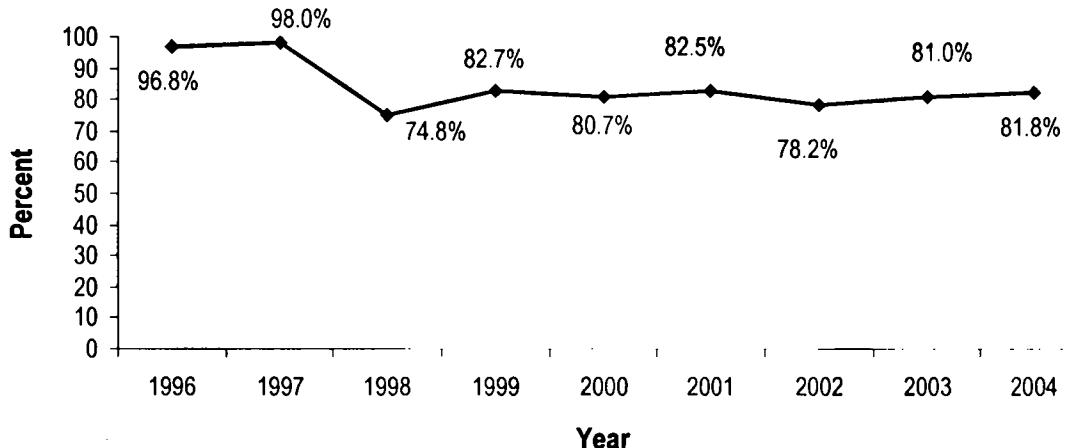

\*\*Each percentage is calculated by the Number of Violations for a specific contaminant divided by the Total Number of monitoring and reporting violations (or 897). The column total is not 100% due to incremental rounding errors.

\*\*\*Each system with a violation is only included once in the number of systems total and the population affected total. To summarize, 374 systems had a total of 897 major monitoring or reporting violations, affecting a total population of 180,264.

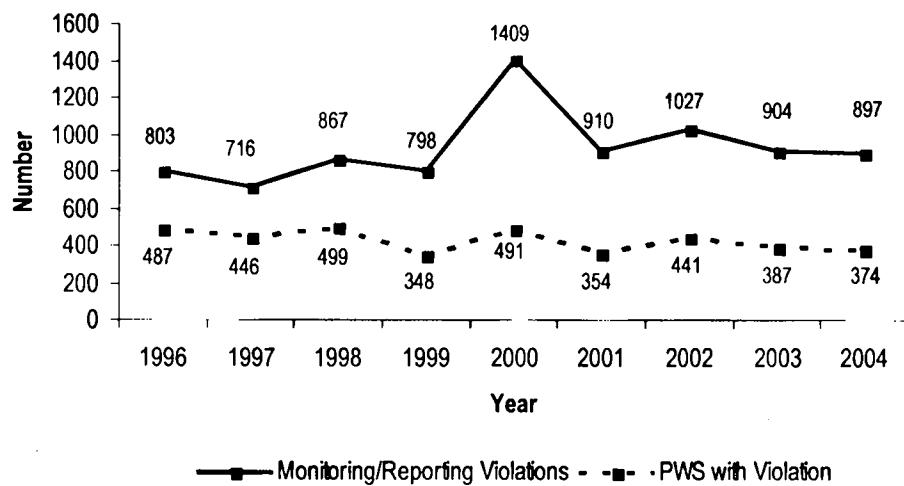

## Monitoring & Reporting Compliance Rates: 1996 - 2004

The number of public water supplies in compliance with all major monitoring and reporting requirements has fluctuated between 74.8% and 82.7% over the past seven years. The first two years of this report only included major significant non-compliant systems, which is a subset of major monitoring and reporting violations, and is not fully comparable to the more inclusive data reported since 1998. This chart indicates the percentage of PWS in compliance with all major monitoring and reporting requirements, which was 81.8% in 2004.

**Percentage of PWS in Compliance with all Major Monitoring & Reporting Requirements: 1996 - 2004**

## Monitoring & Reporting Violations: 1996 - 2004

In 2004, both the number of systems with monitoring and reporting violations, and the number of violations slightly declined from 2003. There was a major new rule (disinfectants and disinfection byproducts rule) that was implemented in 2004 for most CWS serving fewer than 10,000 people. The level of effort put forth in complying with this rule by both the state's drinking water operators and the IDNR's drinking water staff is evident due to the actual decrease in the overall number of monitoring and reporting violations.

## Enforcement Actions

Any time a system incurs a violation, enforcement actions are taken. All systems are issued a notice of violation (NOV), which requires that the public be notified about the violation and any possible health effects. Operation permits are used to list the monitoring and reporting requirements, and also any compliance schedule that the system must meet in order to remedy a violation. The operation permit is termed a "bilateral compliance agreement", because the system has a legal right to appeal the document for 30 days, after which time it is binding.

If a system is unable or unwilling to mitigate a violation, an administrative order (AO) is the next enforcement action. An AO may be issued with a monetary penalty, or more commonly, without a monetary penalty. The next level of escalation in enforcement actions is to refer the system to the Iowa Attorney General for enforcement.

All violations remain "open" until the system satisfies the requirements to return it to compliance. In the case of a monitoring violation, returning to compliance may be as simple as collecting the sample that was missed and conducting public notification. In the case where a system has an ongoing health-based standard violation, the system may have to install treatment processes to be able to successfully remove the contaminant from the water. These types of situations can take many months to remedy, and the system is required to conduct public notification at intervals throughout the time period when they are not in compliance with the health standard.

IDNR tracks the corrective actions for all violations at all PWSs. All violations and corrective actions are reported to EPA. When the criteria for compliance are met, the specific violation is coded "Compliance Achieved". Failure to achieve compliance in a timely manner may result in the issuance of an administrative order. These are the most commonly used enforcement actions:

- NOV issued: A notice of violation has been issued to the system by the department.
- PN requested: Public notification for the violation must be done by the system.
- PN received: Public notification has been done by the system and a copy has been received by the department.
- BCA issued: A bilateral compliance agreement between the system and the department has been issued.
- AO w/Penalty: An administrative order with a penalty has been issued by the department.
- AO w/o Penalty: An administrative order without a penalty has been issued by the department.
- AG Case Referred: The system has been referred to the Attorney General's Office for enforcement action.
- Compliance Achieved: The system is now in compliance and the specific violation is "closed".

Most violations have a predefined set of enforcement actions, which include the following four actions at a minimum: notice of violation issued, public notification requested, public notification received, and compliance achieved. Once the PWS has successfully met the compliance achieved criteria, the system is returned to compliance in the department's computer tracking system.

## **Variances and Exemptions**

Iowa does not use the variance and exemption allowances from EPA.

### **Public Notification, Lead Public Education, and Consumer Confidence Report—567 IAC Chapter 42**

The SDWA requires a system to notify both the people who consume the system's water and the department whenever the following violations occur:

- a Maximum Contamination Level (MCL) has been exceeded,
- a Maximum Residual Disinfectant Level (MRDL) has been exceeded,
- a required Treatment Technique (TT) has not been achieved,
- the lead action level is exceeded in at least 10 percent of the tap water samples,
- a Compliance Schedule has not been met,
- a Health Advisory (HA) has been exceeded,
- a waterborne emergency has occurred,
- a certified operator has not been retained for CWS and NTNC systems, or
- other situations where the department determines that public notification is needed.

#### **MCL, MRDL, or Treatment Technique Violation**

To comply with the MCL, MRDL, and TT public notification requirements, the PWS must:

- notify the department within 48 hours after the violation occurred (24 hours for acute violations);
- notify the consumers by the required public notification procedures; and
- provide proof of such public notice including a certification to the department.

#### **Monitoring or Reporting Violation**

All PWSs must issue public notification for failure to:

- monitor and report the required data to the department;
- comply with established testing procedures; or
- meet the public notification requirements.

#### **Public Education for a Lead Action Level Exceedance**

A PWS must notify the IDNR and the population served by the PWS when the 90th percentile exceeds the action level for lead. This lead public education requires that mandatory language be provided to the consumers every twelve months as long as the action level is exceeded, in the following forms:

- newspaper announcement;
- pamphlets and brochures to doctors, clinics, schools, daycare facilities, etc.;
- attachments to customers' water bills;
- a notice printed directly on the water bill; and
- a public service announcement must be issued to television and radio for broadcasting.

In addition to the annual notice, a public service announcement must be issued every six months to local television and radio broadcast outlets.

### **Consumer Confidence Reports**

All CWS must notify the public by July 1 of every year with information on the quality of the water delivered by the system in the previous calendar year, and to characterize the risks (if any) from exposure to contaminants in the drinking water. This report, called a Consumer Confidence Report (CCR), must be prepared by each CWS and made available to their public. The CCR must include the following information:

- source water information;
- definitions of terms used in the report;
- information on detected contaminants (if any were detected), including mandatory language and additional health information where applicable; and,
- whether the system is not in compliance with any other requirement, including monitoring, public notification, operation, administrative order, or operator certification.

Each CWS must mail or otherwise directly deliver one copy of the report to each customer. Mailing waivers are issued to CWS having fewer than 10,000 persons, provided the system had no violations for the covered calendar year. A CWS serving fewer than 500 persons and having a mailing waiver is allowed to publicly post their CCR.

In 2004, 21 CWS failed to prepare and distribute their CCR for 2003. Each CWS received a reporting violation for this failure.

### **Health Effects**

If a public notification or public education requirement is not met, the public health is placed at risk because the public is unaware of the potential health effects of the water being consumed. Children, pregnant women, the elderly, and persons with compromised immune systems are at the greatest risk from most contaminants.

### **Public Notification or Public Education Violation**

A system is in violation of the public notification or public education rules when it does not issue public notification specific to its violation and does not provide proof of notification to the IDNR. A system is returned to compliance when it publishes the appropriate public notification or public education language within the required amount of time and provides the proof to the IDNR.

## Operator Certification—567 IAC Chapter 81

All CWS and NTNC are required to have a certified operator in direct responsible charge of the water treatment and water distribution systems. The operators must be certified by the department at the same classification of the plant or water distribution system at a minimum.

The Iowa Operator Certification Program reporting time frame is July 1 through June 30. For the certification year of July 1, 2004 through June 30, 2005, the program efforts included:

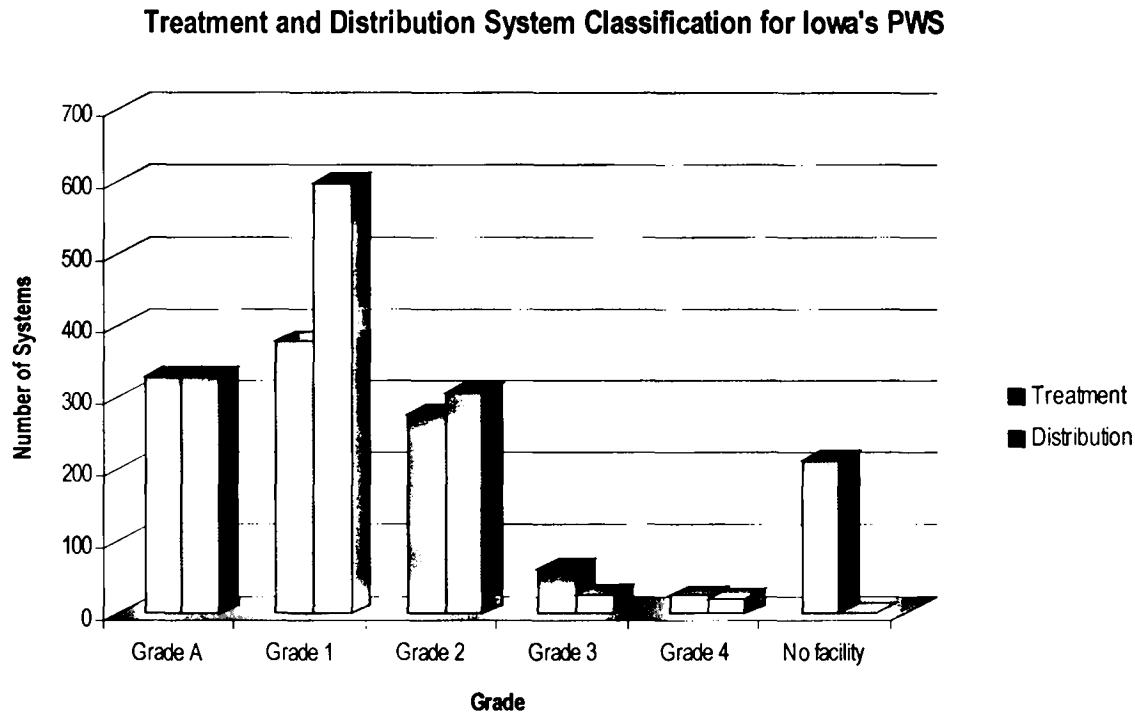

- implementation of new operator certification database,
- continued implementation of the new certified operator requirements for community and nontransient noncommunity water supplies, and
- soliciting bids and awarding contracts for operator training.

### **Classification of Systems, Facilities, and Operators**

In 2002, all CWS and NTNC were required to designate a certified operator in direct responsible charge of the water treatment and water distribution systems. The facilities are classified according to complexity, with Grade 4 being the most complex. Listed below are the Iowa CWS and NTNC systems in all of the classifications, as of June 20, 2005.

<b>Facility Grade</b>		<b>Type of Public Water Supply</b>		<b>Total Number of PWS</b>
<b>Water Treatment</b>	<b>Water Distribution</b>	<b>Community</b>	<b>Non-transient non-community</b>	
(These systems have no treatment plant.)	WD1	165	4	169
	WD2	37	1	38
	WD3	4		4
	WD4	2		2
Grade A (WT and WD combined)		235	93	328
WT1	WD1	339	27	366
WT1	WD2	12		12
WT2	WD1	62	1	63
WT2	WD2	201	10	211
WT2	WD3	1		1
WT2	WD4	1		1
WT3	WD0	1		1
WT3	WD1	1		1
WT3	WD2	43		43
WT3	WD3	10	4	14
WT3	WD4	4		4
WT4	WD2	3		3
WT4	WD3	8		8
WT4	WD4	14		14

The various treatment and distribution system classifications are listed below, along with the number of Iowa systems in each grade classification.

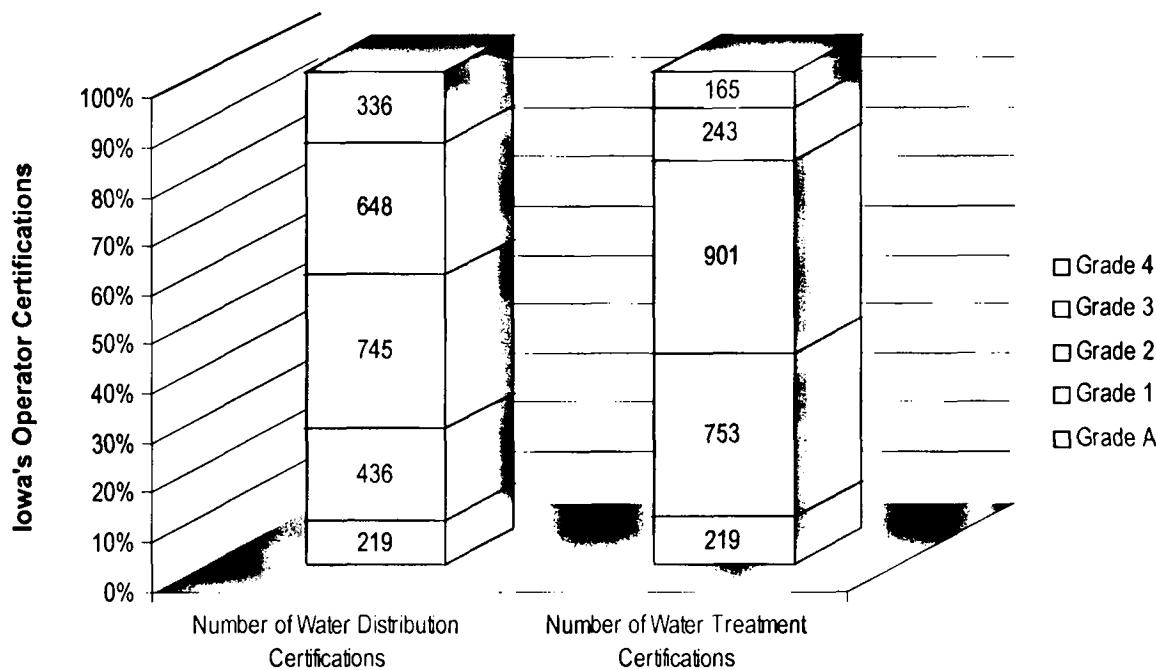

### **Operator Qualifications**

There are 160 small system Grade A certifications, which includes both water treatment and water distribution. In this reporting period, there were 2,035 active water distribution certifications and 1,926 active water treatment certifications.

Certification Grade	Number of certified Water Distribution Operators	Number of certified Water Treatment Operators
Grade A	219 (combined WT and WD)	
Grade 1	436	753
Grade 2	745	901
Grade 3	648	243
Grade 4	336	165

This chart depicts the makeup of the two types of certifications, including the percentage that each certification grade contributes to the whole. Note that Grade A is included in both certifications, since it is a combined water distribution and water treatment certification.

## Enforcement

Compliance actions were directed at three public water supply systems that failed to have a certified operator in charge of their water supply. There were no license revocation actions taken against any operators in this reporting period.

## Certification Renewal

Operator certifications are renewed every two years, with the next renewal period ending in June 30, 2007. Continuing education requirements must be met by March 31, 2007 in order for the operator to renew for the next period. Operators holding a Grade A, 1 or 2 certification are required to earn 1.0 continuing education unit (10 contact hours). Operators holding a Grade 3 or 4 certification must earn 2.0 continuing education units (20 contact hours).

## Abbreviations

AG	Attorney General
AL	action level
AOP	administrative order with penalty
AOWP	administrative order without penalty
BCA	bilateral compliance agreement
CCR	consumer confidence report
CT	contact time
Cu	chemical symbol for copper
CWS	community public water supply
EPA	U.S. Environmental Protection Agency
FDA	U.S. Food and Drug Administration
GW	groundwater
IGW	groundwater under the direct influence of surface water
HA	Health Advisory
HPC	heterotrophic plate count
IAC	Iowa Administrative Code
IDNR	Iowa Department of Natural Resources
IOC	inorganic chemical
LSL	lead service line
MCL	maximum contaminant level
mg/L	milligrams per liter
M/R	Monitoring and Reporting
MRDL	maximum residual disinfectant level
mrem/yr	millirems per year
NOV	Notice of Violation
NTNC	non-transient non-community public water supply
NTU	nephelometric turbidity units
Pb	chemical symbol for lead
pCi/L	picocuries per liter
PN	public notification
PWS	public water supply system
PWSS	Public Water System Supervision (EPA program)
Rn	chemical symbol for radon
SDWA	Safe Drinking Water Act
SDWIS/FED	Safe Drinking Water Information System/Federal (EPA's electronic database)
SOC	synthetic (nonvolatile) organic chemical
SW	surface water
SWTR	Surface Water Treatment Rule
TCR	Total Coliform Rule
TNC	transient non-community public water supply
TT	treatment technique
U	chemical symbol for uranium
V/E	variance or exemption
VOC	volatile organic chemical
WD	water distribution
WT	water treatment
WQP	water quality parameters

## Distribution of this Report

The Safe Drinking Water Act requires both summary and detailed reports from the State be accessible to the U.S. EPA, the Governor of the Iowa, and the public. The following options will be utilized to make this report readily available to the public.

The IDNR will supply the detailed report to the:

- EPA Headquarters in Washington, DC,
- EPA Region 7 Headquarters in Kansas City, KS, and
- Office of the Governor of Iowa.

The IDNR will also:

- publish an official notice of report availability,
- include the report on the IDNR Internet website and make it available for downloading, and
- make the detailed and summary report available for individuals and organizations upon request.

## APPENDIX A: EPA Violations Summary Report

The EPA Violations Summary Report listed in this appendix is a numerical total of the violations of each contaminant required under the SDWA. This report lists the number of violations of each contaminant categorized by both MCL/MRDL/TT Violations and major federal Monitoring & Reporting Violations. State violations, such as failure to pay an annual fee, are not included in this summary report.

### Legend

<b>Column (from left to right)</b>	<b>Description of Heading</b>
1	The first column identifies the contaminant name
2	The second column identifies the MCL for that contaminant
3	The third column identifies the number of MCL violations for that contaminant
4	The fourth column identifies the number of PWSs with MCL violations for that contaminant
5	The fifth column identifies the number of TT violations
6	The sixth column identifies the number of PWSs with TT violations
7	The seventh column identifies the number of M/R violations for that contaminant
8	The eighth column identifies the number of PWSs with M/R violations for that contaminant

**APPENDIX A: EPA VIOLATIONS SUMMARY REPORT**

State: Iowa	Reporting Interval:	January 1, 2004 through December 31, 2004						Significant Monitoring/Reporting Systems with Violations
		MCLs	Number of Violations	Number of Systems with Violations	Treatment Techniques	Number of Systems with Violations	Number of Violations

\* Each system is only counted once in the subtotal category (i.e., 48 systems had 52 monitoring/reporting violations).

## APPENDIX B: Iowa Public Water Supply Violation Data

All public water supply systems that incurred one or more violations during 2004 are listed in the following appendix, including the most recent enforcement action. Systems that became "inactive" during the year because they no longer met the definition of a public water supply are denoted in boldface print on the table.

### Legend

Item	Description
PWS Name	Business name of the Public Water System
Minimum Population Served	Population that could use the water, as reported to IDNR by the PWS. For municipal systems, it is the most recent official census.
County	County location of PWS
PWSID Number	Public Water System Identification number, a unique and dedicated number permanently assigned to each PWS
Violation Number	A unique, dedicated identification number assigned to each violation as it occurs.
Analyte	The analyte that triggered the violation.
Compliance Period End Date	Date at the end of the compliance period in which the violation occurred.
Violation	The EPA-assigned text description of the violation.
Violation Type	The alphabetic code description of the violation.
Enforcement Action Date	Most recent action taken by the PWS or the IDNR in response to the violation. The final action for any violation is "Compliance Achieved", meaning the system is now back in compliance.
Enforcement Action	Date the follow-up action or enforcement action occurred
